

Skills and Tools — Capability Surface

The Nebula Supermarket Ops Agent is designed with a tool-based capability layer that allows the AI agent to perform real supermarket operations rather than only provide conversational responses.

Product & Inventory Management

- Search and retrieve product information
- Add and manage products
- Check current stock levels
- Receive new stock
- Identify low-stock products
- Maintain inventory records

Billing & Sales Operations

- Start a new customer bill
- Add products and quantities to a bill
- Modify bill items before finalization
- Calculate bill totals
- Finalize transactions
- Record completed sales
- Update inventory after finalized sales

Customer Credit / Khata

- Maintain customer credit information
- Add credit transactions
- Record customer payments
- Check outstanding customer balances

Store Reports & Analytics

- Generate daily sales information
- Check daily closing information
- Monitor inventory
- Identify low-stock items
- Generate business analysis reports

Invoice Generation

- Generate invoice PDFs after completed transactions

- Return generated invoice documents through Telegram

Store Preferences

- Store persistent shop information
- Remember standing preferences such as preferred brands and payment preferences
- Maintain preferences across conversations and application restarts

Transaction Safety

- Use idempotency keys for important transactional operations
- Prevent duplicate Telegram updates from being processed
- Keep stock updates tied to finalized transactions
- Avoid directly deleting important inventory records

Conversational AI

The agent interprets natural-language requests and selects the appropriate backend tool instead of requiring users to learn fixed commands.

For example:

"Show me products that are low in stock."

The agent identifies the required inventory operation, calls the corresponding tool, retrieves the database information, and presents the result in natural language.

Telegram Interface

The complete capability surface is accessible through a Telegram bot, allowing a store operator to perform supermarket operations through a simple conversational interface.
